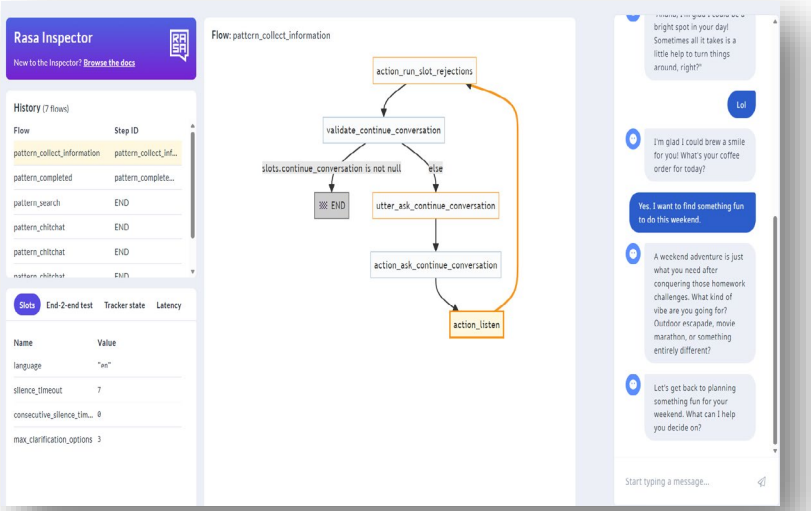
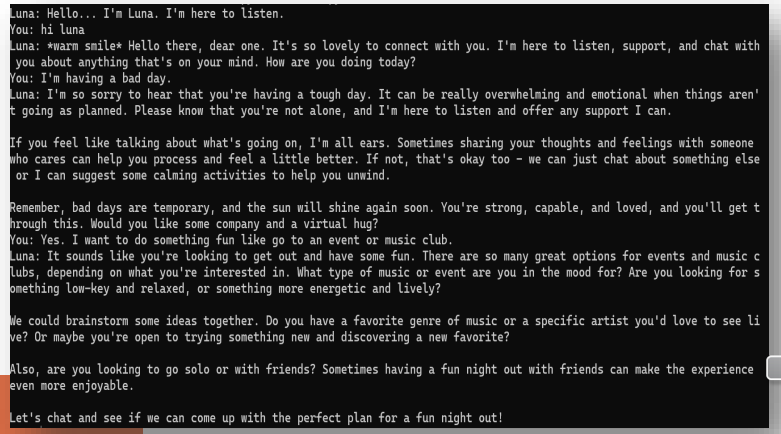
PROJECT: AGENT ALIVE

- Purpose: to learn how to create and use an emotional chatbot, of some sort.
- Plan: acquire open-source software to build two chatbots from scratch.
- Process: add a different LLM to the chatbots.
- Proof: successful deployment of a website to offer users the option to chat with an emotional chatbot.

Rasa Inspect



Chatterbot Train



```
Luna: Hello... I'm Luna. I'm here to listen.
You: hi luna
Luna: *warm smile* Hello there, dear one. It's so lovely to connect with you. I'm here to listen, support, and chat with
 you about anything that's on your mind. How are you doing today?
You: I'm having a bad day.
Luna: I'm so sorry to hear that you're having a tough day. It can be really overwhelming and emotional when things aren'
t going as planned. Please know that you're not alone, and I'm here to listen and offer any support I can.

If you feel like talking about what's going on, I'm all ears. Sometimes sharing your thoughts and feelings with someone
who cares can help you process and feel a little better. If not, that's okay too - we can just chat about something else
 or I can suggest some calming activities to help you unwind.

Remember, bad days are temporary, and the sun will shine again soon. You're strong, capable, and loved, and you'll get t
hrough this. Would you like some company and a virtual hug?
You: Yes. I want to do something fun like go to an event or music club.
Luna: It sounds like you're looking to get out and have some fun. There are so many great options for events and music c
lubs, depending on what you're interested in. What type of music or event are you in the mood for? Are you looking for s
omething low-key and relaxed, or something more energetic and lively?

We could brainstorm some ideas together. Do you have a favorite genre of music or a specific artist you'd love to see li
ve? Or maybe you're open to trying something new and discovering a new favorite?

Also, are you looking to go solo or with friends? Sometimes having a fun night out with friends can make the experience
even more enjoyable.

Let's chat and see if we can come up with the perfect plan for a fun night out!
```

Capstone Projects in IT
W6: Weekly Update 1
1-Mar-26

Team: UnoChat

CREE BROWNLEE

CONTRIBUTION: 100%

- Total hrs.: 50
- Installed two chatbots, added two different LLMs: Claude and Groq and tested functionality.
- *MILESTONE 1: COMPLETED*

ACCOMPLISHMENTS

I installed two chatbots: Sun (Rasa) & Nova (Chatterbot). There were many difficulties, and several environments were deleted. I added two different LLMs, Claude and Groq, to train them. I couldn't use either on both chatbots due to cost restrictions. Lastly, I tested the functionality of both via the command line for Chatterbot and the Rasa localhost GUI. All initial tests passed.

Note: I could not complete the project without using an AI bot. I tried finding tutorials and following the website instructions, but neither worked. The tutorial bots were for weather or financial assistants, all outside the scope of my project.

Tighten conversational flows

TASK LIST

- **PRODUCT SEARCH**
  - ~~Found: Autogen, Rasa, Chatterbot, Dialogflow, Semantic Kernal, and Langchain~~

- **INSTALL IN VMWARE WORKSTATION PRO**
  - ~~Installed Chatterbot, Rasa and Langchain in VMWare~~

- **ADD LLM**
  - ~~Found Claude, Ollama, Huggingface and Groq.~~

MILESTONE	MONTH
Build a functional chatbot	03/26
Finish building 2nd chatbot	03/26
Create a web UI for both chatbots	04/26
Present finished product	04 -05/26

CHALLENGES & CONCERNS

Task	Roadmap	Work	Result
Find a chatbot	Chose Rasa and Chatterbot	Both bots are trained – 3 wks. ahead of schedule	Lots of issues
Install Rasa	Couldn't figure out how to paste the dev-key in VMWare	Moved to WSL Ubuntu and installed the bot but couldn't figure out how to add another LLM	Little configuration needed once the code was corrected to add a new Claude LLM
Install Langchain	Couldn't understand the installation or AI chat responses	Opted out of continued work on it	Failed
Install Chatterbot	Installation was easy, however, trying to train the bot was difficult	OpenAI kept throwing errors, so I decided to change the LLM	Added the Groq LLM and it worked fine, with minimal bot training

NEXT WEEK: TASK LIST

- Build UIs for both Sun & Nova
- Create unique user interface
- Train for UX, somehow

Failed Chatterbot Training

```
~
"train.py" [New] 22L, 406B written
cb2@chatter:~/chatter_new1$ python3 chatbot.py
Type something to begin...
hello
hello
hi
i'm happy
how are you
i'm sad
